

AS-2339 Aqua Putty

A medium-setting (15 minutes), fiberglass-reinforced polymer compound that enables permanent repairs to many surfaces including fiberglass, concrete, ceramic, glass, metals, wood and many plastics. It contains a fading blue dye and becomes white after mixing. The consistency (like modelling clay) eliminates drips and runs, facilitates adhesion to the substrate and allows the material to be shaped and formed as needed before curing begins.

Applications:

Specially formulated to adhere surfaces exposed to damp or underwater (salt or fresh) conditions. It is also suitable for water tanks, fish boxes, marine recreational equipment, battery cases, sinks, hot tubs, gutters, tanks, pools; to form custom gaskets. It can also repair fittings, pipes, electrical connections and leaking gaskets.

Available colour: White

Features:

- ✓ Bonds in 15 minutes
- ✓ Works on wet surfaces
- ✓ Easy to use
